Filtration & Separation Solutions

## DYNAMIC BED & PIN BED CLARIFIERS

Roytec is a leader in liquor clarification applications using deep-coned dynamic bed & pinned-bed clarifiers or the generation of high-quality overflows and/or high-density underflows.

Technologies offered combine feed pre-treatment with recycled solids, inorganic coagulant and flocculation with both dynamic bed designs and pin-bed floating media options.

These clarifiers provide consistent, reliable operation with an overall reduction in suspended solids down to 10ppm suspended solids.

### Common uses for Roytec DBC & PBC are:

- Copper PLS clarification
- Zinc PLS clarification
- Plant water and Gland Service water polishing
